E-TECH STRUT BRACES

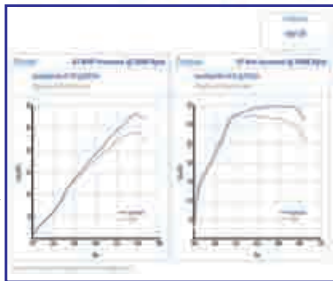

E-tech strut braces are available in a brushed alloy finish (T2) and also in a highly polished finish (T3) All bars are heavy duty with black steel ends. They are manufactured in billet aluminium. E-tech strut braces will improve chassis rigidity for better handling.

Superchips
be driven

Superchip can improve the performance of most modern cars, including non-turbo, Turbo and Turbo diesels. You'll find your car gives a sharper reaction, is more responsive and offers a smoother ride. This is done by a specially trained Technician, who will re-programme your car's on board Computer to enhance performance. Fitting can be carried out at our centre, or through our mobile service, we currently cover the entire Yorkshire area. Superchips will give you:-

- **Fast response**
- **Smoother ride**
- **Better acceleration**
- **More bhp.**

Non Turbo Applications – fully fitted price £289

- Upto 10% more power and Torque
- Most models from 1988 onwards

Turbo Diesel Applications – fully fitted price £485

- Upto 30% more power and upto 40% more Torque
- All models

Turbo Applications – fully fitted price £485

- Upto 35% more power and Torque

Available for:

- Astra/ Zafira Turbo, 2Ltr 16v Calibra/ Cavalier Turbo, VX220 Turbo

AIR FILTERS

High capacity foam air filters with increased air flow. The PX range of Pipercross high performance air filters are supplied with a dirt retention spray, to fit simply install in place of standard air filter. Pipercross Panel filters produce the ultimate engine filtration, engineered for drivers who demand the very best from their engine.

AIR INDUCTION KITS

- Full fitting kit
- 150mm OD spinning
- Increased Performance
- Sports Sound
- Washable and reusable
- Maximum Air flow

VIPER INDUCTION KITS

Pipercross Viper induction kits use velocity air force to deliver cold air directly into the engine. The reverse flow technology filter and 150mm ram pipe make use of the physical phenomenon of air tending to move towards surface area's, creating more air flow on the edge rather than in the centre of the inlet. The unique design of the filter cone and inlet 'tune' the moving air flow to increase its speed and therefore its pressure maximising the laminar air flow into the engine, again resulting in increased power.

Applications marked (VFC) are with cold air feed. Applications marked (VF) are without cold air feed.

- Carbon Fibre Heatshield
- Reverse Flow Element
- Sealed Cold Air Feed
- Mid Range Improvement
